Introduction

This document presents a systematic collection of charts detailing the performance and asset quality of selected scheduled commercial banks in India. The focus is on nine banks: State Bank of India, HDFC Bank, Bank of Baroda, Punjab National Bank, Axis Bank, City Union Bank, ICICI Bank, Indian Bank, and Federal Bank. The charts are organized into two principal sections. The first section provides bank-wise analyses, illustrating individual trends in key financial indicators such as Gross and Net Non-Performing Assets, Provision Coverage Ratio, Capital Adequacy, Tier 1 capital, and Net Profit. Each chart is intended to facilitate close examination of the strengths, vulnerabilities, and trajectories of individual institutions.

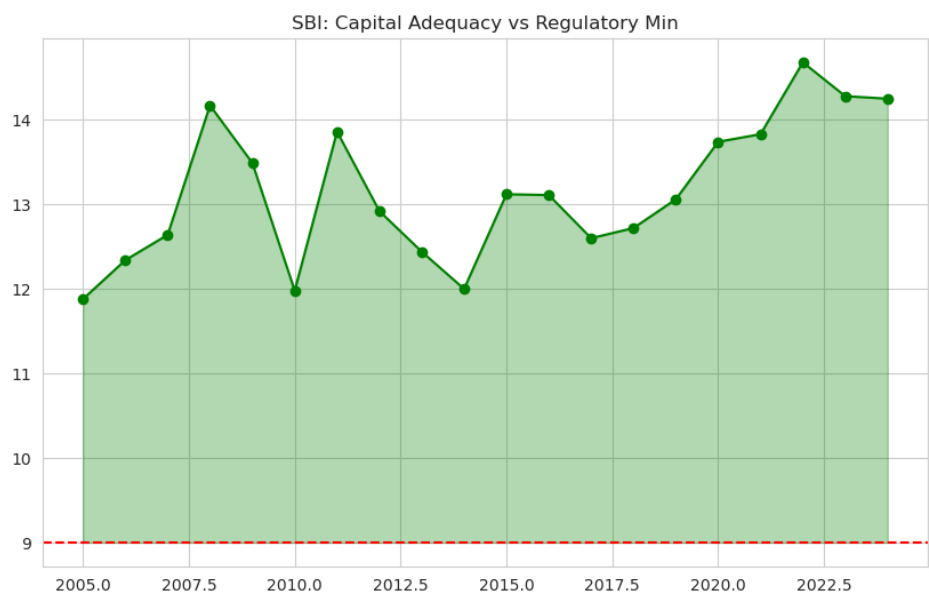

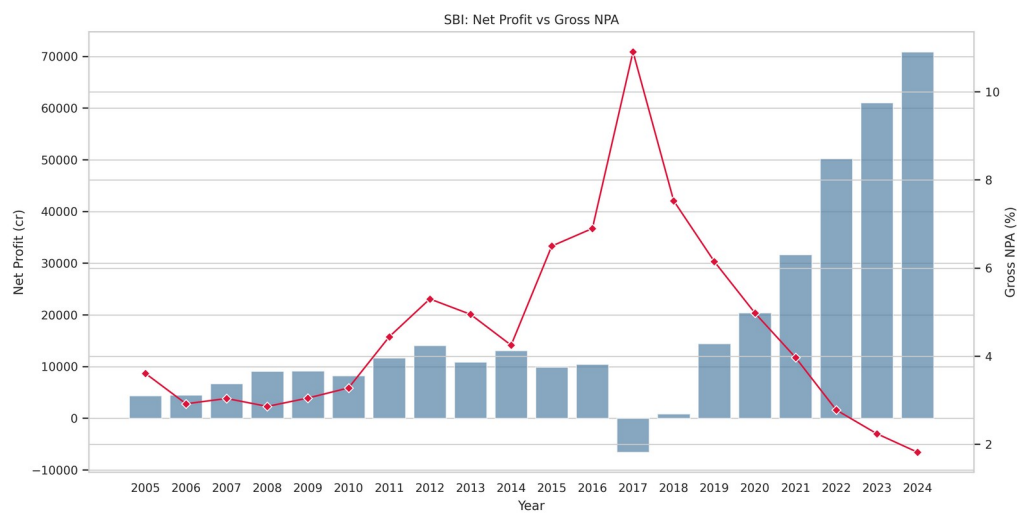

The second section provides systemic analyses, employing aggregated visualizations to capture sector-wide patterns and interrelations. These include three-dimensional risk cubes, heatmaps, boxplots, violin plots, scatter plots, and trend analyses, all designed to highlight the evolution of asset quality, profitability, and capital adequacy across the banking system. The systemic section allows for a comparative assessment across ownership types, capitalization tiers, and other structural dimensions.

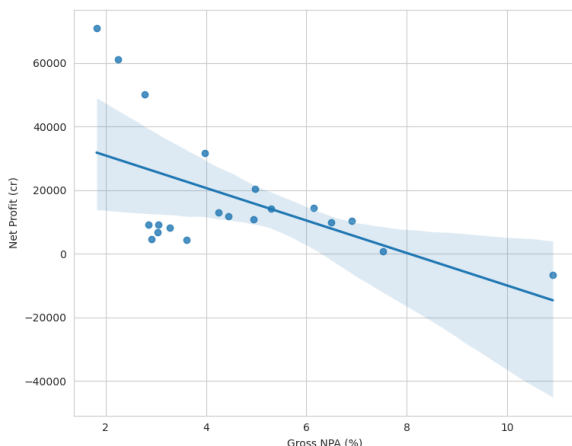

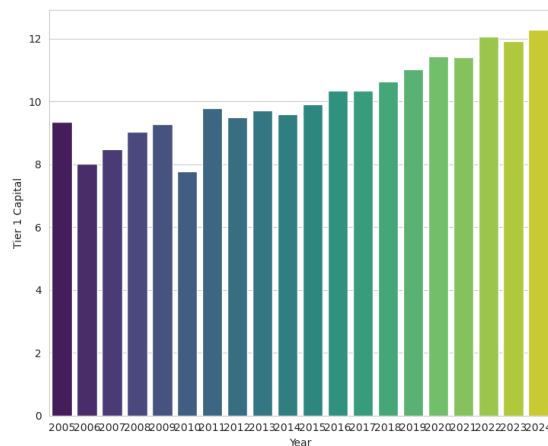

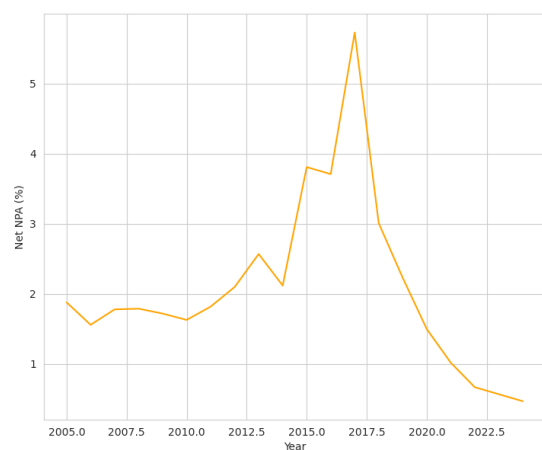

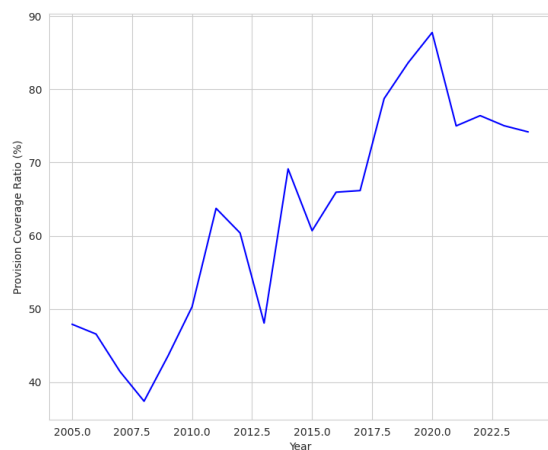

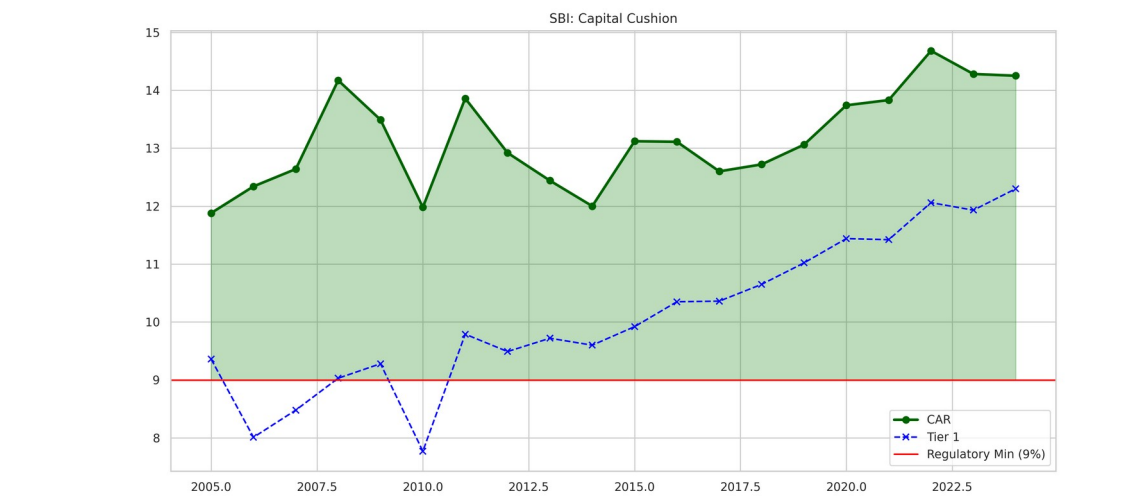

This compendium is intended as a foundational reference to support the preparation of a broader analytical paper on asset quality in India's banking sector. All visualizations have been carefully structured to provide clarity, maintain archival rigor, and enable both cross-sectional and longitudinal analyses in accordance with institutional standards.
